New CASE ValveDim app: The whole SAUTER valve and actuator range on your smartphone

SAUTER is launching a new mobile app which can be used to search for valves and actuators at any time, online or offline. The free app is impressively convenient and very efficient: Intuitive operation makes it easier to search for individual products and combine them. This reduces time-consuming, repeated searches for offers.

CASE ValveDim has a simple filter search and useful extra functions.

SAUTER's range of actuators comprises more than a hundred products, and there are almost 450 HVAC valves on offer. The new mobile app will make it easier to find the right parts and the ideal valve/actuator combinations. With the launch of CASE ValveDim, SAUTER's entire product range can be accessed from anywhere via mobile phone.

Find the ideal product for your application with just a few settings

The new app is free of charge and offers an intuitive product search. The range of suitable valves can be found instantly by filtering features such as valve type, connection type or nominal diameter. The selection can be narrowed down even more by specifying the heat exchanger capacity, flow rate or differential pressure.

The most suitable actuator can be found by selecting the power supply and the control signal. This makes it easy to focus on the most suitable product. Each individual part can be saved in a personal favourites list so that it is always available without needing to search again. Further product information and documentation can be accessed directly from the SAUTER product website.

The selected valve/actuator combinations can also be stored in projects. And that's not all – the lists with the valve/actuator combinations can be exported from the app as a project table in PDF format so that they can be shared with contacts.

Even in buildings or rooms where mobile phone reception is poor or absent, there is no need to forego the advantages of the app: CASE ValveDim can also be used offline.¹

All the benefits at a glance:

- Fast and easy selection of valve/actuator combinations according to defined features
- Valve design based on heat exchanger capacity, flow rate and differential pressure in HVAC systems
- The app can even be used without an internet connection
- Selected products can be saved as favourites for later use
- Product combinations can be shared as a project table in PDF format or via hyperlinks
- Further information on all products can be accessed via the link to the data sheet

Availability

This is a free version, with which SAUTER wants to make it easier for installers, planners and service staff to find the product they are looking for. CASE ValveDim Version 1.0 is available immediately globally from the iOS and Android App Stores in German, English and French.

About SAUTER

As the leading provider of solutions for building automation technology in Green Buildings, SAUTER ensures good climate conditions and a sense of well-being in sustainable environments. SAUTER is a specialist in developing, producing and marketing products and systems for energy-efficient total solutions, and offers a comprehensive range of services to ensure the energy-optimised operation of buildings. Our products, solutions and services enable high energy efficiency throughout the entire life-cycle of a building – from planning and construction through to operation – in office and administrative buildings, research and educational facilities, hospitals, industrial buildings and laboratories, airports, leisure facilities, hotels and data centres. With over 100 years' experience and a track record of technological expertise, SAUTER is a proven system integrator that stands for continuous innovation and Swiss quality. SAUTER provides users and

operators with an overview of energy flows and consumption, and therefore of the development of the costs involved.

The SAUTER Group

- Company active worldwide with headquarters in Basel, Switzerland
- Founded in 1910, it is built on more than 100 years of tradition and experience
- With more than 2,300 employees, it is present and active globally
- Complete building management solutions from a single source.
Focus: maximum energy efficiency and sustainability
- Investment protection and operational reliability over the entire building life-cycle
- Technology leader in the building automation and system integration sector
- Member of eu.bac, BACnet Interest Group (BIG-EU), BACnet International, EnOcean Alliance
- Excellent references available at www.sauter-controls.com
