Mobile Building Services 2.0 is now available

Flexible room booking, mobile workstations, mobile inventory and parking reservations make [Mobile Building Services](#) the ideal system for today's way of working. Users not only control room functions via an app, they can also use it to access options to make reservations all around the building. The connection to the Building and Energy Management System ensures optimal room comfort and demand-oriented management.

An app for flexible building use

[SAUTER's Mobile Building Services \(MBS\)](#) play a key role in providing a digital user experience. Access to room operating options is provided based on indoor smartphone localisation and a personal authentication code.

In the background, MBS are linked to the local building management system, through which the utilisation of rooms and workstations can be viewed at any time. This allows demand-oriented management and optimisation of room utilisation. In addition, predefined scenarios ensure convenience and energy efficiency, in particular by directly linking reservation times to corresponding scenarios.

New functions for end users

The end user app [Mobile Room Control \(MRC\)](#) was redesigned in the spring. MBS 2.0 now provides three new reservation functions which are especially tailored to today's flexible working world.

- Meeting rooms and mobile workstations
The reservation of meeting rooms is an integral part of the Mobile Room Control app. Additional options are now available for an even more precise selection:
 - Personal favourites lists
 - Room selection based on the number of participants
 - Reservation of shared inventory or equipment, such as projectors
 - Specification of room seating or table arrangement
- Assets and equipment
Assets and technical equipment can also be reserved independently of the room booking. This not only ensures that everything necessary is available but also serves operators' demands for more efficient resource management.
- Parking spaces
Individual or multiple parking spaces can be booked for specific time slots via the MRC app. MRC app users such as employees can reserve free parking spaces for themselves and for selected persons.

Individual room control with comprehensive building management for comfort and energy efficiency

How is the digital transformation manifesting itself in buildings and facilities? It is no longer possible to imagine everyday life and smart buildings without digital systems and processes. They are also crucial to today's flexible way of working and have helped change the way workplaces and shared equipment are handled.

[SAUTER's Mobile Building Services](#) support end users in the digital processes for office buildings, apartments or hotels. MBS combine local building management with individual room operation via smartphone and tablet – regardless of location and time.

About SAUTER

As the leading provider of solutions for building automation technology in Green Buildings, SAUTER ensures good climate conditions and a sense of well-being in sustainable environments. SAUTER is a specialist in developing, producing and marketing products and systems for energy-efficient total solutions, and offers a comprehensive range of services to ensure the energy-optimised operation of buildings. Our products, solutions and services enable high energy efficiency throughout the entire life-cycle of a building – from planning and construction through to operation – in office and administrative buildings, research and educational facilities, hospitals, industrial buildings and laboratories, airports, leisure facilities, hotels and data centres. With over 100 years of experience and a track record of technological expertise, SAUTER is a proven system integrator that stands for continuous innovation and Swiss quality. SAUTER provides users and operators with an overview of energy flows and consumption, and therefore of the development of the costs involved.

The SAUTER Group

- Company active worldwide with headquarters in Basel, Switzerland
- Founded in 1910, it is built on more than 100 years of tradition and experience
- With more than 3,300 employees, it is present and active globally
- Complete building management solutions from a single source
- Focus: maximum energy efficiency and sustainability
- Investment protection and operational reliability over the entire building life-cycle
- Technology leader in the building automation and system integration sector
- Member of eu.bac, BACnet Interest Group (BIG-EU), BACnet International, EnOcean Alliance
- Excellent references available at www.sauter-controls.com
