SVC 8.1: Focus on security and ease of use

The latest version of SAUTER Vision Center (SVC) combines BACnet/SC Hub, 2-factor authentication and single sign-on. With optimised dashboard functions and even more flexible operating options, SVC 8.1 offers an efficient solution for the needs of today's building operation.

[SAUTER Vision Center (SVC)](#) meets the demands of building operators for comprehensive building, energy and maintenance management. Thanks to its modular structure the web-based management tool, in the HTML5 standard, enables the operation, analysis and visualisation of building functions with maximum flexibility, regardless of location or system. The latest version, SVC 8.1, presents a joint approach to security and ease of use.

The highlights of SVC 8.1 include:

1. BACnet/SC Hub: This function enables encrypted data transmission with full BACnet functionality for decentralised buildings and premises. The BACnet/SC protocol is used in the [cloud solution (Vision Services)](#) and can now also be used in the private cloud by local IT departments.
2. 2FA and SSO: SVC 8.1 implements essential security requirements through the introduction of 2-factor authentication (2FA) and single sign-on (SSO). The combination of 2FA and SSO offers a balanced approach between security and usability.
3. Optimised energy management: A new function enables the adjustment of a setpoint, such as the room temperature, for several objects at the same time. Additional functional enhancements

facilitate the use of templates and charts, which optimises operation and set-up efficiency, especially in large-scale projects.

Version SVC 8.1 is available as of now. Please get in touch with our sales department.
